

Using your Wireless Device in U.K. Libraries

Visit the **University of Kentucky Networking Wiki** (<http://wiki.uky.edu/network/>) for detailed instructions on how to **register** your wireless device. By registering your device, UK students, faculty, and staff can avoid logging in to the Wireless Portal for every session.

Up to three enabled wireless devices may be registered at one time. Users are responsible for any activity connected to a device registered, and device registrations will be automatically disabled every six months, or when the user is no longer a current student, faculty, or staff member.

Medical Center Library

2011-2012

Guide to Resources

<http://libraries.uky.edu/MCL>

The Medical Center Library features subscription databases, electronic journals, and e-books for research in all health sciences disciplines. In addition, off-campus access to resources and librarians provide information and research assistance when and where you need it. The Library is located on the first floor of the William R. Willard Medical Education Building adjacent to the College of Dentistry.

DATABASES

Online databases permit users to search hundreds of journals, electronic books, and conference proceedings in focused searches on a specific topic. Seamless access to the Library's own e-journals is convenient, on or off-campus.

Databases also enable users to save or email results as well as export literature lists to bibliographic software, such as EndNote.

E-Books

Hundreds of e-books are accessible on and off campus in all health sciences disciplines via our database vendors and individual publishers. Titles are organized by category and alphabetically. All e-books can be searched by topic within the respective database collection, and are easily viewed on an iPad. <http://libguides.uky.edu/mcle-books>

Journals

The Medical Center Library has access to thousands of journals, many in electronic format and available on and off campus. Personalized e-mail alerts of newly published issues and tables of contents can be set up by users. If you're looking for a specific journal, or just all journals by category, there is a convenient link on the Library's website that will guide you to the correct database or to our document delivery service if the title is not available at the MCL.

Follow us on . . .

UKMCL's Twitter feed features announcements of new and updated research resources as well as news items of interest in the health sciences. Our Facebook presence is an expanded forum for discussion of new resources and comments.

Mobile Resources

The MCL can provide guidance and assistance with accessing those Library databases which are optimized for mobile devices as well as share information about some of the more popular free "apps" used by students in a clinical setting. A special guide is available at <http://libguides.uky.edu/mclmobile>

Classes

Classes are scheduled in the MCL's classroom each semester on a variety of topics, such as introductions to public health resources, nursing resources, PubMed and Medline, Web 2.0 applications in academic medicine, and EndNote for the health sciences. A link to the current schedule is located on the left sidebar of the MCL's website. Classes can also be scheduled by request, and librarians are available to visit your classes and meetings to discuss resources in the various health sciences. A link to the list of liaison librarians to the various colleges, departments, and groups is found on the left sidebar of the MCL's website, <http://libraries.uky.edu/MCL>

University Libraries

In addition to the Medical Center Library, the University of Kentucky library system maintains a humanities, social sciences and life sciences collection in William T. Young Library as well as subject libraries in several colleges and departments around campus. Each library holds materials related to the particular discipline it serves. These materials and their locations are listed in InfoKat, the Libraries' online catalog. This catalog is also available within the UKMobile app in iTunes U.
